

# ◀ As simple as a mouse click: yunIO makes process optimization and data integration in SAP a breeze. ▶

Design, automate, and integrate your SAP processes easily and directly in the web browser, without SAP GUI and seamlessly transfer SAP data for efficient workflows.

yunIO is your universal no-code solution for automating SAP processes and transferring SAP data to third-party systems. Whether in web- and cloud-based solutions or on-premises systems – yunIO is flexible and connects your SAP system to any environment that supports REST web services.

## Your benefits at a glance:

- ▶ Design, automate, and integrate SAP processes directly **in the browser**
- ▶ **No-code** required, do it all without SAP GUI or complex programming
- ▶ **Flexible deployment** to any application and platform that supports REST Web services
- ▶ Intuitive user interface with quick and easy setup
- ▶ Record and execute even complex SAP transactions with **Transaction Feature** and automate routine tasks thanks to **Robotic Process Automation (RPA)**
- ▶ Central **access for all employees** via your existing collaboration tool
- ▶ Avoid data redundancies, incorrect entries, and system failures
- ▶ **Flexible workflow design** and simplified processes
- ▶ Cost savings, since employees do not need expensive SAP training and learning materials
- ▶ Access to SAP processes **at any time** and from any device
- ▶ Versatile use cases

### <Versatile possibilities>

yunIO is versatile and is already used in a variety of processes - in different business areas of all industries. Discover the different use cases and learn how yunIO is used in practice.

### <SAP process automation without SAP GUI>

With the help of a web interface, yunIO services can be easily put together, which address SAP function modules, tables or transactions and are used in the target application. SAP complexity is eliminated and a simple REST service is created.

### <Robotic Process Automation>

The Transaction Feature in yunIO enables a whole new generation of transaction automation. Record SAP transactions and execute them automatically. This way you can easily automate recurring workflows and relieve your departments.
